

Need a hand managing the details of your projects? Take advantage of our professional project management services. Our experienced team of professionals and know-how tailored specifically to markets involving sound room integrations - will gladly help you. We will work on your behalf with your vendors, manufacturers and contractors to help bring your project together from construction to final result. Having The Soundroom Experts on your side at the beginning will keep your project running smoothly, more efficiently, and keep you on budget & on schedule!

While typically needed on large scope projects, even small projects can become overwhelming and get out of control. Having a solid partner on your side overseeing the details can ease the burden on your own team. Our robust experience in the industry gives us the upper hand when it comes to bringing clarity and organization to the process. We can help to:

Develop a strong budget to keep your work moving forward on time and aligned with the scope of the project.

Coordinate the project plan in accordance with the project scope & liaison with your architects, vendors, contractors and local authorities.

Stay on top of frequently over-looked items that can impact or delay project timelines like seismic issues, code compliance, ADA applications etc...

Help advise or specify important technical details like HVAC, Electrical, Fire Suppression etc., and monitor that the final numbers match acoustic performance expectations.

Develop a detailed project plan. Hold all parties accountable to their action items and milestones. Keep the project on track and keep budgetary concerns aligned with project scope.
